Admission FREE, Reception following

31st Presentation of Art & Science

"Art is the creation of forms symbolic of human feeling", wrote one of my favorite philosophers of art, Susanne Langer. In this thirty-first Presentation of Art and Science, I would like to unpack this statement in the context of my symvisio compositions. In particular, I will discuss the making of Symvisio XII.

We will complete the evening by setting up telescopes in front of the theatre, courtesy of the San Mateo County Astronomical Society and CSM Astronomy department. With help from the experts, you will be treated to the spectacular view of celestial beauties.

Mohsen Janatpour

Professor, Math, Physics, and Astronomy

Coordinator of Astronomy Program
